

Corporate Sustainability Reporting

CSROnline
Corporate Sustainability Reporting

CSROnline provides organizations the ability to measure key performance measures for reporting, analysis, tracking and monitoring to assess the health of their business. This will provide overall view of the business activities and help them to attain sustainable growth.

CSROnline products are so flexible that the end user can define and configure measures or parameters as per the organization needs and track the performance of the same.

Line Managers and Management Executives are increasingly under pressure to provide timely decisions to improve their operational performances. The faster the KPI's data are retrieved, reviewed, analyzed and decisions are taken, the more the organizations can manage their performances. Managing KPI information includes collecting, reviewing and analyzing the data whereas Managers need to have visibility to their KPI information on real time basis to achieve the corporate objectives. Collecting, tracking, reviewing and analyzing the data from different sources is a difficult task which even involves complex formulae's and calculations to provide precise KPI results.

Presently, CSROnline is configured for Corporate Sustainability Reporting (CSR) which is built on Global Reporting Initiatives (GRI) guidelines. This solution tracks, manages and reports economic, environmental, and social key performances indicators information from different locations/work areas to generate Corporate Sustainability Reporting (CSR) to report Global Reporting Initiative (GRI).

- Very Flexible - where the end user can configure the location specific KPI/ parameters
- Inbuilt Workflow and Calculation Engine, where end user can define the processes and frequency of data collection.
- Profile create & associate privileges and display of the KPI items based on assigned roles
- Ad hoc reporting – End user can create and generate user specific reports on real time basis
- Assign/create targets for each KPI
- End user can define the frequency of data collection for each KPI and site
- In-built Alerts and Notifications incase of non-completion of task
- Inbuilt reporting engine to generate reports in both tabular and graphical formats
- Exports reports all following formats Excel, Word, PowerPoint and CSV

CSROnline - One system for all your needs

Using simplified features, a clean user interface and web based technologies it is now easier manage to Information of triple bottom line Key indicators data of the organization. This information gives the company's performances towards the sustainable growth and the data generated will have high amount of transparency, reliable and accountability and authenticated so that it is shared to their stakeholders like employees, investors suppliers, and customers etc to make decisions. CSROnline helps you to eliminate spreadsheets, manual forms and disparate databases into a single management
